

Title of module

Modular Advanced Practical and Seminar
in the Focal Point Programme
"Molecular Medicine" VZ: 185780, 185781
**"Characterization of proteins isolated from peroxisomes and
peroxisomal membranes of the yeast
Saccharomyces cerevisiae"**

Credit points

4

Available in semester(s)

1

Hours per week

5.3

Compact course

Lecturer(s)

Prof. R. Erdmann and teaching assistants

Teaching methods

Two weeks advanced laboratory course with an
intergrated seminar

**Evaluation of learning
progress**

Active participation in the laboratory tasks and seminar,
feedback during the experiment, participation in
laboratory seminars/scientific presentation

Mode of examination

Assessment of active and successful participation in the
practical (50%) and a written project report (50%)

Learning objectives

After completion of the course, students will have aquired
basic practical skills in biochemical, microbiological and
molecular biological methods. The students will be able to
isolate protein-complexes by affinity chromatography and to
characterize these complexes according to their size (size-
exclusion chromatography) and constituents (SDS-PAGE,
immuno-blotting). Students will learn how state-of-the-art
molecular cell biological methods are used to tackle the
structure and function of cellular nanomachines with the
peroxisomal protein translocation apparatus as an example.

Soft skills

Communication and collaboration skills will be improved by working in a small team of 2-3 students advised by members of the research laboratory. Presentation skills will be improved by learning how to present scientific data in talks and scientific discussions.

Contents of module

Topics:

Characterization of metabolite transport across the peroxisomal membrane

Dissection of the peroxisomal protein import machinery

Structure and function of the peroxisomal nano-machine complex Pex1p/Pex6p, two AAA-ATPases.

Methods:

- Cultivation of Bakers yeast
- Different techniques for cell breakage
- Cell fractionation and isolation of cellular membranes
- Separation of protein mixtures and protein complexes by SDS polyacrylamid gel electrophoresis
- Western blotting and immunodetection
- Size-exclusion chromatography
