## Postdoctoral Researcher

### Plant genomics and transcriptional networks (100% TvL-E)

The research group of **Professor Dr. Ute Krämer** has an opening for a **postdoctoral researcher** in **experimental plant genomics** and the **analysis of transcriptional networks**. The successful candidate will conduct **high-throughput sequencing-based transcriptomics** under a variety of growth conditions and in multiple plant individuals of a **large in-house biodiversity collection** comprising ~850 field-collected individuals of the **plant species *Arabidopsis halleri***. Plants treatments will comprise a variety of **nutrient deficiency** and **mineral excess** conditions, as well as cultivation in **natural soils**. Among the closest wild relatives of the common genetic model *A. thaliana*, the ecological model *A. halleri* has strongly differing biological features including extraordinarily large within-species phenotypic variation, extreme traits as well as high genetic diversity (**1-3**). The successful candidate will be a member of an inter-disciplinary team of researchers in **experimental genetics, computational genetics/genomics, molecular physiology** and **field biology**. Funding is from an **ERC Advanced Grant** awarded for an ambitious and comprehensive approach employing *A. halleri* as a model for addressing **plant local adaptation**. The goal is to understand the **nature and origin of the underlying genetic variants** as well as **genotype-phenotype relationships** in a functional network context.

Thorough **knowledge** and **extensive practical experience** in **large-scale plant cultivation** under controlled conditions, in particular in **hydroponics**, as well as in large-scale **sequencing-based transcriptome data analysis**, including also **statistics** and the appropriate **software packages**, are a pre-requisite. Experience in **transcriptional network** construction and analysis are important. Applicants should have a keen interest in programming using **R/bioconductor, Python** or **Perl, data management, automation** (for example RNA extraction, preparation of libraries for sequencing), **experimental evolution** and the **integration of data** from different research approaches. Documented skills in one or several of these tasks are highly advantageous (see also [https://www.ruhr-uni-bochum.de/mgpp/Downloads/job\\_ad\\_2018\\_05\\_15\\_ERC.pdf](https://www.ruhr-uni-bochum.de/mgpp/Downloads/job_ad_2018_05_15_ERC.pdf)).

Our **research group** is diverse and international (<http://www.rub.de/mgpp/kraemer.html>). The **laboratory, office** and **plant growth infrastructure** is large and **outstanding**, and we have substantive **gardener** and other **technical and administrative support**. **Ruhr University Bochum (RUB)** is among the **leading research universities** in Germany. As a modern reform-oriented University hosting **ca. 40,000 students**, RUB bundles the entire scope of scientific disciplines on a **single campus**. Bochum is a medium-sized city of around 300,000 inhabitants positioned in the **heart of Central Europe**, within the Rhein-Ruhr metropolitan region of more than 5 million inhabitants. Short- and long-distance **public transport** is seamless, with fast access to neighbouring **mountains and forests** as well as the **cultural programme** in Bochum and nearby cities, for example **Essen** (10 minutes), **Dortmund** (10 minutes), **Düsseldorf** (30 minutes) and **Cologne** (1 h). The University has outstanding **family support** and **day-care facilities**.

Please send your application, including a **cover letter** summarizing your expertise and research interests, a **CV**, a list of **publications, degree certificates** and the **summary** of your PhD thesis, to Prof. Dr. Ute Krämer ([Ute.Kraemer@rub.de](mailto:Ute.Kraemer@rub.de)) by email, with the subject line "**Application Postdoctoral Researcher ERC PG-2018**". Projected start date 10/2018.
